Question-1:

Write code and connections in wokwi for ultrasonic sensor.

Whenever distance is less than 100 cm's send "alert" to IBM cloud and display in device recent events.

Upload document with wokwi share link and images of IBM cloud.

When no object is detected

The screenshot shows the Wokwi IoT dashboard for a device named 'DISTANCEDETECT' of type 'ULTRASON'. The device status is 'Disconnected'. The 'Recent Events' tab is active, displaying a table of events. The table has four columns: 'Event', 'Value', 'Format', and 'Last Received'. There are five rows of events, all with the value 'Distance: 79.64/object: "Near"' and the format 'json'. The 'Last Received' times are '4 few seconds ago', '4 few seconds ago', '2 few seconds ago', '4 few seconds ago', and '4 few seconds ago' respectively. The bottom of the page shows 'Items per page: 50' and '1 of 2 items'.

When object is detected in ultrasonic detector

The screenshot shows the Wokwi simulation interface. At the top, there are buttons for 'SAVE', 'SHARE', and 'Docs'. The 'sketch' tab is selected, showing a simulation of an ESP32 microcontroller connected to an ultrasonic sensor (HC-SR04) and a red LED. The sensor is connected to the ESP32 via I2C. The LED is connected to the ESP32 via a digital pin. The simulation is running, and the console shows the following output:

```
1 object is near
1 Sending payload: {"distance":97.82,"object":"Near"}
1 Publish ok
1 Distance in cm 97.82
2 object is near
2 Sending payload: {"distance":97.82,"object":"Near"}
2 Publish ok
```
